Work Experience

01/2026 – 03/2026

Agartala, Tripura

BRANCH RELATIONSHIP EXECUTIVE

Sbi Card

Promoted and sold SBI credit cards by approaching potential customers in branch and field locations.

Explained card features, benefits, and eligibility criteria while assisting customers with the application process.

Education

2023 – 2026

Agartala, Tripura

BA in psychology

ICFAI Tripura University

2018 – 2020

Agartala, Tripura

Higher Secondary

Henry Derozio Academy

Certifications

01/2026

Python Essentials

Presented by Cisco

Credential Id :-9536a1b1-5ed6-4f08-acca-827d235c77bd

30/2/2025

AI Fundamentals: Foundations for Understanding AI

Projects

Aggressive LLM-Powered Forex Trading Bot

AI + Quantitative Trading System | Multi-Agent Architecture

- Built an **LLM-driven forex trading bot** designed for short-term competitions, targeting **30% returns in 7 days** using aggressive execution strategies.
- Designed a **modular multi-agent architecture** consisting of Market Analyst, Signal Agent, LLM Decision Agent, Risk Guardian, and Execution Engine for real-time trading pipelines.
- Integrated **LLM decision-making layer (Azure OpenAI / AWS Bedrock)** to evaluate every trade with structured inputs and generate **EXECUTE / SKIP / WAIT decisions** dynamically.
- Implemented **adaptive risk management system** with:
 - 2–3% risk per trade
 - 15% max drawdown protection
 - Dynamic position sizing based on confidence and market conditions
- Developed **phase-based trading strategy**:
 - Aggressive → Rocket → Lock-In phases
 - Risk and behavior automatically adjust based on performance thresholds

- Enabled **advanced trade management features**:
- Partial profit booking (+2R)
- Trailing stops (+3R)
- Break-even logic
- Pyramiding for trend continuation
- Built **real-time execution pipeline (15-second cycles)** with MT5 integration and live equity tracking.
- Designed system to handle **multiple forex pairs across global sessions (Asian, London, NY)** with up to 5 concurrent trades.
- Implemented **logging and performance tracking system** for trade decisions, LLM reasoning, and equity growth monitoring.

Forex Agentic — Autonomous Multi-Agent Trading System

<https://github.com/bishal11111111/forex-agentic>

- Engineered a **multi-agent autonomous forex trading system** optimized for **7-day broker competitions**, combining technical analysis, dynamic risk control, and execution automation.
- Designed a **modular agent-based architecture**:
- MarketAnalystAgent → session-based signal generation
- SignalAgent → multi-layer confluence filtering
- RiskGuard → adaptive position sizing & protection
- ExecutionAgent → full trade lifecycle automation
- PerformanceTracker → real-time P&L and analytics
- Implemented a **thread-safe SharedState communication bus**, enabling efficient inter-agent coordination without external messaging systems.
- Developed **session-aware trading strategies**:
- Asian: Mean reversion (Bollinger Bands + RSI + ATR)
- London: Breakout momentum (EMA + MACD + ADX)
- New York: Trend continuation (Fibonacci-based entries)
- Built **phase-based trading logic (Scout → Accumulate → Secure)**:
- Dynamically adjusts **risk per trade (0.3%–1.5%)**
- Filters trades based on **confidence thresholds**
- Optimizes performance based on competition timeline
- Implemented **advanced risk management system**:
- 15% total drawdown → emergency shutdown
- 5% daily loss → auto trading pause
- 3% floating loss → forced position exit
- Spread and news-event filters to avoid high-risk conditions
- Developed **execution engine with full lifecycle control**:
- Trailing stop-loss
- Partial profit booking
- Trade monitoring via MT5 integration
- Built **real-time orchestration system** running every 30 seconds for continuous signal evaluation and execution.
- Added **automated Git-based monitoring system** for version tracking with background commit/push functionality.
